

Nestlé Australia

High hygiene laboratory

Nestlé required a customised, modern and hygienic facility to provide them with greater control of their current operational inefficiencies. Nestlé identified the need to integrate three existing operations and laboratory staff into one centralised, modern QA facility. The existing facilities required compliance-driven upgrades and the most cost-effective solution was to consolidate their operations.

-  Mulgrave, Victoria
-  Advisory services, design and construction

Project scope

Initially, Nestlé engaged Wiley to prepare a feasibility report for the relocation of their NQAC facility.

This commission was later expanded to include the design and construction of a state-of-the-art laboratory facility to house three core areas:

- A modern, high-tech exterior and impressive statement entry and shared administration space — conveying the highly-specialised work being carried out within and fitting with the values of the Nestlé brand
- Chemistry laboratories
- Microbiology laboratories

Business value to client

Wiley delivered Nestlé a fresh and modern QA facility, with a future-focussed and specialised design. This design delivers Nestlé control of current operations, optimises efficiencies and provides significant flexibility to expand.

The flexible design supported Nestlé with their future goals to expand into potential new food products and processes, ultimately increasing their market share.

The project also ensured Nestlé achieved industry compliance and allowed them to upgrade their laboratory standards to reflect their highly respected position in the international food industry.
